Clubdash Organizer Pro Blueprint

Mobile-First Tooling • Funnel Builder • Game-Day Command Center

1. The Promoter Paradigm

The Organizer is the primary growth engine of the Clubdash ecosystem. Operating strictly as independent promoters, coaches, and league managers, they utilize the Clubdash Pro App as a mobile-first command center to architect communities, source physical venues, and monetize their audiences. The ecosystem thrives on their ability to build robust event funnels seamlessly without being tethered to a desktop interface.

Self-Serve Onboarding

Organizers authenticate and verify identities swiftly. The platform allows instant deployment of personal brands and digital storefronts to the Sodia consumer feed without massive capital outlay.

Venue Sourcing

Leveraging the B2B Marketplace, Organizers view real-time facility inventory, claim time blocks, and sign wholesale agreements digitally directly from their smartphones.

Roster Management

Player invites, team creation, and eligibility verifications are handled natively. Organizers maintain living CRM databases of every player that passes through their funnels.

Financial Autonomy

All ticket sales, registration fees, and merchandise transactions are instantly split via Stripe Connect, ensuring Organizers receive net payouts immediately upon event settlement.

2. The Mobile Funnel Builder

Launching a recreational league or weekend tournament previously required spreadsheets, third-party payment links, and manual calendar invites. The Clubdash Pro App consolidates this into an intuitive Mobile Funnel Builder. Organizers follow a streamlined, linear creation process that publishes a polished landing page directly into the Sodia consumer ecosystem.

- **Step 1: Event Configuration:** Define event type (Tournament, Camp, Drop-In), select the sport tag, and establish the format (e.g., 3v3, Round Robin).
- **Step 2: Venue Handshake:** Browse the B2B marketplace, select a facility, and lock in the rental block. The venue cost is algorithmically tied to the event's split ledger.
- **Step 3: Ticketing & Tiers:** Create Early Bird, General Admission, and VIP spectator passes. Set capacity constraints tied physically to the venue's rules.

Dynamic Pricing & Scarcity

Organizers can enable algorithm-driven scarcity. As a 16-team tournament bracket fills, the remaining two spots automatically surge in price to capture premium intent, driving urgency within the consumer app.

3. The Universal Bracket Engine

At the core of the Pro App is a JSON-based algorithmic bracket generator. Organizers do not manually draw brackets. Once registration closes, the engine ingests the roster data, seeds teams based on historical Sodia player ratings (if applicable), and generates a fully interactive elimination or round-robin tree. This bracket is instantly pushed live to all participants' devices.

4. Game-Day Command Center

On the day of the event, the Organizer Pro App shifts into "Live Action" mode. It serves as a digital referee whistle and master control board. Organizers can manage multiple courts simultaneously, input live scores, and resolve disputes. When a score is finalized on the app, the JSON bracket updates globally across the facility's leaderboards and the Sodia consumer feed, triggering automated push notifications for subsequent matchups.

5. Communication & Audience Retention

Retaining athletes is critical for an Organizer's long-term enterprise value. The Pro app includes an integrated broadcast module allowing targeted push notifications based on consumer behavior. If an Organizer hosts a monthly 5v5 basketball series, they can send a one-tap direct invite to all players who participated in the previous month but have not yet registered for the upcoming event. Furthermore, Organizer VIP tiers allow top-performing promoters to bypass base facility transaction fees, incentivizing volume and platform loyalty over off-platform cash transactions.
