Feature Analysis Framework

Establishing the methodology for cross-functional use case documentation.

To ensure every feature you propose is robust, scalable, and user-centric, our analysis will run through a strict tri-lateral review process. Every generated PDF will break down your feature requests into actionable insights, technical requirements, and quality standards.

The Tri-Lateral Approach

UI/UX Design

Focuses on user journeys, interface layout, accessibility, and friction reduction. Ensures the feature is intuitive and aligns with modern design paradigms.

Quality Assurance (QA)

Defines acceptance criteria, edge cases, negative testing paths, and performance thresholds. Ensures the feature is resilient and bug-free before deployment.

Technical Development

Architects the data structures, API endpoints, security protocols, and feasibility assessments. Ensures the codebase remains scalable and performant.

Standard Documentation Template

For each feature you submit, I will generate a comprehensive use case document adhering to the structure outlined below.

Feature Name	[Feature Title provided by you]
Primary Use Case	A high-level summary of what the user is trying to achieve and the business value of the feature.
UI/UX Requirements	• **User Flow:** Step-by-step interaction path. • **Key Components:** Modals, buttons, forms, state changes. • **Error States:** How the UI gracefully handles failure.
QA Acceptance Criteria	• **Given / When / Then:** Standard BDD scenarios. • **Positive Path:** The happy path works as intended. • **Edge Cases:** Unexpected user behavior or network drops.
Technical Architecture	• **Data Model:** Database tables or schema changes. • **Endpoints:** Required API routes (GET, POST, etc.). • **Security:** Validation, sanitization, and authorization requirements.

App Ecosystem Baseline (Global Standards)

All future feature documentation assumes the following structural foundation:

- **Core Flow:** Landing Page → Signup → Preference/Interest Onboarding → Main Screen.
- **Floating Bottom Navigation (Left to Right):** Discovery Map, Track, Quick Add (Post/Story), Meca (Membership Card Wallet), and Profile.
- **Top Navigation:** Hamburger Menu (Settings) on the top left; Messaging and Notifications on the top right.
- **Main Feed (Sodia):** A rich, Instagram/TikTok-style feed of posts and reels supporting standard social interactions (Like, Comment, Bookmark, Share internally/externally).
