Phase 1: Identity, Auth & Onboarding

GetPhysical B2C App Master Specification • Version 3.0

> **Document Protocol:** This document maps the absolute truth for the B2C React Native application Phase 1. LOCKED = Decided, build as written. NEW = Gap closure, needs confirmation.

0. Global Architecture & Rules

- **0.1 Navigation** LOCKED **:** Fixed bottom bar, 5 tabs, visible on all main screens: (1) Sodia, (2) Discover, (3) Cards, (4) Track (Lift/Move/Food/Explore), (5) Profile. Users can change the default launch screen in Settings.
- **0.2 Roles on one account** LOCKED **:** Individual is default. Staff/Owner sees "Switch to Business Mode" (native QR scanner). Coach sees "Switch to Coach Dash" (client roster). The "Post As" toggle chooses which identity publishes.
- **0.3 Security & Auth** LOCKED **:** Two-token JWT architecture. Refresh token stored in Secure Enclave. High friction (biometrics) required ONLY on "Confirm & Pay" and destructive account actions. Zero friction for QR generation (dynamic hash expiring every 60s).
- **0.4 Verification Rules** LOCKED **:** Tracker stamps are system-generated and uneditable. Challenge entries must come from logged sessions. Lift challenges require video; Move challenges auto-sync GPS.
- **0.5 Actionable-object Principle** LOCKED **:** Facility tags, coach widgets, and challenges on posts always render as tappable CTAs. They never navigate away; they open bottom sheets over the current view.
- **0.7 Field Limits** LOCKED **:** Post caption: 280 chars. Bio: 150 chars. Challenge entry: 150 chars. Fitness goals: min 1, max 5. Stories expire 24h after posting.

1. UX Flows: Screens 1 & 2

Screen 1: Splash LOCKED

- **System check on launch:** Look for an encrypted JWT.
- **Condition A (Token fresh):** Route directly to Sodia feed.
- **Condition B (Token stale/locked):** Trigger native biometric prompt. Success refreshes token and routes to Sodia. Failure falls back to Auth Landing.
- **Condition C (No token):** Route to Auth Landing.
- **States** NEW **:** Force-update state (blocking "Update required" screen with store link). Offline state (if token exists but no network, open Sodia in read-only cached mode with banner; QR generation prompts "Connect to show QR").

Screen 2: Auth Landing LOCKED

- **Elements:** Phone number field (numeric pad, +63 default prefix), primary button "Send OTP", secondary buttons "Continue with Apple" and "Continue with Google".
- **Legal** NEW **:** Line under buttons: "By continuing you agree to the Terms and Privacy Policy" with tappable links.
- **States:** Invalid number (inline error), rate-limited ("Too many attempts").
- **Edge Case** NEW **:** If Apple/Google returns no phone number, route to a "Verify your phone" step using the OTP flow to ensure every account has a verified phone for B2B deduplication.

1. UX Flows: Screens 3 to 6

Screen 3: OTP Verification LOCKED

- **Elements:** 6-box numeric grid (auto-advance, paste support, SMS autofill). Countdown "Resend in 30s" becoming a tappable "Resend Code".
- **States:** Wrong code (boxes shake, red border), expired code, lockout message on too many failures.
- **System:** On success, issue two-token JWT, store refresh in Secure Enclave. New user to Profile Setup; Returning to Sodia.

Screen 4: Basic Info LOCKED

- **Elements:** Profile picture circle (camera/gallery), First Name, Last Name, Username (@format).
- **System:** Username uniqueness validated live (green check or red "Taken" with 3 suggestions NEW). Allowed: letters, numbers, underscore, period.
- **Age Gate** NEW **:** Date of birth field. Under-13 blocked. Under-18 restricted from payments.

Screen 5: Preferences LOCKED

- **Elements:** Home Location (city search), Fitness Goals multi-select pills (min 1, max 5, e.g., Weightlifting, Tennis, HIIT).
- **System:** Identity Signal feeds directly into the Weighted Ranking Engine (WRE) cold-start algorithm.

Screen 6: Find Friends & Permissions LOCKED

- **Elements:** "Sync Phone Contacts" button, list of matched contacts with "Follow", bottom "Skip for now".
- **States:** Permission denied (fallback to search), zero matches (suggested users by location).
- **Primers** NEW **:** Before OS prompts, show one-screen explainer. Location ("find clubs and verify lifts"), Notifications, Camera/Mic, Photos, Health/Fit (asked only in Integrations).

1.1 Identity & Onboarding Database Matrix

Component	Elements & User Actions	States & Database Operations
Auth & Splash	No UI interactables. Background token check.	Check Enclave for JWT. If Apple/Google SSO returns no phone, redirect to OTP for strict B2B deduplication.
OTP Verification	6-box grid. Timer to Resend.	RPC call to verify OTP. Success issues JWT. New users write to `public.profiles`.
Basic Info	Name, Username, DOB.	Username uniqueness checked via debounced RPC. Age Gate enforced via DB check constraints.
Preferences	Location, Fitness Goals.	Writes to `user_preferences` JSONB. Seeds the cold-start weights for the WRE algorithm.
Find Friends	"Sync Contacts", Follow buttons.	Hashes local contacts, runs array intersection against `profiles.phone_hash`. Writes to `follows` table.
